Canadian Data Report of Fisheries and Aquatic Sciences

Data reports provide a medium for filing and archiving data compilations where little or no analysis is included. Such compilations commonly will have been prepared in support of other journal publications or reports. The subject matter of data reports reflects the broad interests and policies of the Department of Fisheries and Oceans, namely, fisheries and aquatic sciences.

Data reports are not intended for general distribution and the contents must not be referred to in other publications without prior written authorization from the issuing establishment. The correct citation appears above the abstract of each report. Data reports are abstracted in *Aquatic Sciences and Fisheries Abstracts* and indexed in the Department's annual index to scientific and technical publications.

Numbers 1–25 in this series were issued as Fisheries and Marine Service Data Records. Numbers 26–160 were issued as Department of Fisheries and the Environment, Fisheries and Marine Service Data Reports. The current series name was introduced with the publication of report number 161.

Data reports are produced regionally but are numbered nationally. Requests for individual reports will be filled by the issuing establishment listed on the front cover and title page. Out-of-stock reports will be supplied for a fee by commercial agents.

Rapport statistique canadien des sciences halieutiques et aquatiques

Les rapports statistiques servent à classer et à archiver les compilations de données pour lesquelles il y a peu ou point d'analyse. Ces compilations auront d'ordinaire été préparées à l'appui d'autres publications ou rapports. Les sujets des rapports statistiques reflètent la vaste gamme des intérêts et des politiques du ministère des Pêches et des Océans, c'est-à-dire les sciences halieutiques et aquatiques.

Les rapports statistiques ne sont pas destinés à une vaste distribution et leur contenu ne doit pas être mentionné dans une publication sans autorisation écrite préalable de l'établissement auteur. Le titre exact paraît au-dessus du résumé de chaque rapport. Les rapports statistiques sont résumés dans la revue *Résumés des sciences aquatiques et halieutiques*, et ils sont classés dans l'index annuel des publications scientifiques et techniques du Ministère.

Les numéros 1 à 25 de cette série ont été publiés à titre de relevés statistiques, Services des pêches et de la mer. Les numéros 26 à 160 ont été publiés à titre de rapports statistiques du Service des pêches et de la mer, ministère des Pêches et de l'Environnement. Le nom actuel de la série a été établi lors de la parution du numéro 161.

Les rapports statistiques sont produits à l'échelon régional, mais numérotés à l'échelon national. Les demandes de rapports seront satisfaites par l'établissement auteur dont le nom figure sur la couverture et la page du titre. Les rapports épuisés seront fournis contre rétribution par des agents commerciaux.

ABSTRACT

Bijsterveld, L. and M. James. 1986. The Indian food fishery in the Pacific region: salmon catches, 1951-1984. Can. Data Rep. Fish. Aquatic Sci. 627: iv + 142 p.

Annual catches of the five species of Pacific salmon and steelhead trout in all D.F.O. subdistricts in the Pacific region are reported from 1951 to 1984. The food fisheries for each subdistrict outside of the Fraser River system are described.

Key Words: Indian food fishery, salmon, catches.

RÉSUMÉ

Bijsterveld, L. and M. James. 1986. The Indian food fishery in the Pacific region: salmon catches, 1951-1984. Can. Data Rep. Fish. Aquatic Sci. 627: iv + 142 p.

Le présent rapport décrit les prises annuelles pour les cinq espèces de saumons du Pacifique et la truite arc-en-ciel anadrome dans tous les sous-districts du MPO de la région du Pacifique pour la période 1951-1984. Est aussi incluse une description de la pêche de subsistance dans chaque sous-district à l'extérieur du système du Fraser.

Mots-clés: pêche de subsistance des Indiens, saumon, prises

INTRODUCTION

The purpose of this report is to provide, in a single document, Indian food fishery statistics for the Pacific region for the time period 1951 to 1984. The majority of the statistics are based on data collected by D.F.O. personnel from the subdistricts. Indian food fishery statistics for the Fraser river are taken from Schubert (1983, 1984).

The detailed statistics (Appendix D) are organized by D.F.O. district and subdistrict. Subdistricts roughly correspond to D.F.O. statistical areas with the exception of the Fraser river, Yukon and northern B.C. subdistricts.

DATA SOURCES

Estimates of Indian food fishery catch are based on data collected by D.F.O. personnel or are supplied by Band members. Different methods are used to collect the data depending on available resources, fishing methods and band bylaws. The data collection methods include:

1. Observation of the Fishery

A Fisheries patrol vessel is present during a limited food fishery using commercial gear. D.F.O. personnel obtain hails (an estimate of the catch) from a sample of vessels engaged in the fishery and extrapolate to the total number of vessels. D.F.O. personnel may inspect some of the vessel catches to verify the hails.

2. Inspection of Fishing Gear

D.F.O. personnel pull up a sample of set nets in a river (or observe a sample of nets being pulled up) and count the fish in the nets. The average catch per net is multiplied by the total number of nets fishing.

3. Recording on Previous Year's Permits

D.F.O. personnel ask that previous year's permits be turned in as new permits are issued. Permit holders are asked to recall their catch for the previous year. The information is recorded on the back of the old permit.

4. Band Supplied

The bands provide D.F.O. with catch statistics. The data collection methods are generally unknown. Some bands have established a position for a band-employed Fisheries Conservation Officer who is required to cooperate with Department Fisheries Officers according to band bylaws.

AREA DESCRIPTIONS

Masset (Area 1)

Fishing in this area has traditionally been conducted by Haida Indians from the Masset band. The major food fish species are halibut, salmon, roe-on-kelp and shellfish. Salmon are harvested during a net fishery. The main fishing areas are the Ain, Awun and Yakoun rivers. Statistics for this area are based on data collected by D.F.O. personnel through interviews and examination of the catch.

Sandspit (Area 2E), West Coast Q.C.I. (Area 2W)

Fishing in Area 2 has traditionally been carried out by Haida Indians from the Skidegate band. The major food fish species are halibut, salmon, roe-on-kelp and blackcod. Salmon are harvested by commercial gear or short gillnets. The major fishing areas are Copper River, Mathers Creek and Skidegate Inlet.

Traditionally, fishing the Copper River has been a major social event. Many families move to the fishing site for the duration of the fishery. Statistics for this area are based on data collected by D.F.O. personnel through interviews and examinations of the actual catch.

Lower Nass (Area 3)

This area has traditionally been inhabited by Tsimshian Indians of the Tsimshian linguistic group. The Fort Simpson band resides near the mouth of Portland Inlet while the Kincolith village is closer to the river mouth.

The major food fish species are eulachon and salmon, supplemented by halibut, herring, shellfish and seals. Eulachon are harvested by nets during the spring and are smoked or processed at rendering stations to extract oil used for cooking and trade. Salmon are harvested by the Fort Simpson band using commercial net gear. The Kincolith band uses commercial gear and short gillnets. Fishing occurs in tidal waters near the villages. Catch data are collected by D.F.O. personnel monitoring the fisheries using commercial gear. Otherwise, the fishery is monitored by a member of the Kincolith band under contract to D.F.O.

Upper Nass (Area 3)

This area has traditionally been inhabited by Tsimshian Indians of two linguistic groups: Nisga'a and Gitskan Wet'suwet'en. The Nisga'a villages of Greenville, Canyon City and Aiyansh are located on the Nass River. The Gitskan Wet'suwet'en have traditionally inhabited the upper Skeena area. However, the Kitwancool band has fished in this subdistrict although the village is closer to the Skeena.

The major food fish species caught in this area are eulachon and salmon. Eulachon are harvested by nets during the spring and are smoked or processed at rendering stations to extract oil used for cooking and trade. Most of the salmon are harvested by set or drift nets. The Nisga'a generally fish near their village while the Kitwancool fish upriver of the Nisga'a.

Skeena, Waterfront (Area 4)

Fishing in these subdistricts is carried out by nonresident Indians of the Tsimshian group, including the Metlakatla band and Nisga'a and Gitskan Wet'suwet'en. Halibut, salmon and shellfish are major food fish species supplemented by cod, roe-on-kelp and seals. Salmon are harvested using commercial gillnet gear.

Most of the catch data is obtained through "hailing". The catch of some vessels, however, is checked on landing to confirm hailed estimates. The catch estimates for the Lower Skeena are probably not as reliable as other areas for two reasons. First, the food fishery is diffused over a large geographic area, making monitoring difficult. Second, as with most areas, there are not as many fishery officers as are needed to produce accurate catch estimates.

Terrace - Lakelse (Area 4)

Prior to 1979, this subdistrict included two Tsimshian bands (Kitsumkalum, Kitselas) and the following Gitskan Wet'suwet'en bands: Kitwanga, Kitsegukla, Hazelton, Glen Vowell, Kispiox, and Hagwilget. The Moricetown band was included for 1978 only. The Kitsumkalum and Kitselas bands are the only bands included in this district since 1979 and the formation of the Hazelton subdistrict. Eulachon and salmon are the major food fish species. Salmon are harvested using set nets. Catch estimates are based on data collected by D.F.O. personnel observing nets being pulled in or by visiting fishing sites and pulling the nets. About 20 percent of the nets fishing at any one time are observed.

Hazelton (Area 4)

This subdistrict is inhabited by the following Gitskan Wet'suwet'en bands: Kitwanga, Kitsegukla, Kispiox, Glen Vowell, Hazelton, Hagwilget, Moricetown and Kitwancool. Prior to 1979, the Moricetown band was included within other subdistricts. The major food fish species are eulachon and salmon. Salmon are harvested using set and drift nets. Most of the effort occurs near the reserves on the mainstem of the Skeena or Bulkley Rivers. Fishing near Moricetown is conducted using dip nets or gaff hooks. Catch estimates for this subdistrict are based on data collected by D.F.O. personnel observing 20% of the effort on the Skeena. A guardian was stationed at Moricetown Falls prior to 1977.

Smithers (Babine - Morice) (Area 4)

This subdistrict is inhabited by the Takla and Babine Lake bands. Prior to 1978, the Moricetown band was included within the boundaries of this subdistrict. Salmon, the major food fish species, are harvested by gillnet. The Babine Lake band has traditionally fished the Babine River and Lake area. Most of the catch has been taken near Fort Babine. The Takla band has traditionally fished Bear Lake. Catch estimates are based primarily on information collected during inseason trips to fishing locations, where catch estimates are obtained from bands and the number of salmon being processed in

smokehouses is observed. During 1974 to 1977, and in 1984, these estimates were supplemented by those of a guardian at the outlet of Babine Lake (Nilketkum Lake in 1984).

Grenville Principe (Area 5)

This subdistrict is inhabited by Tsimshian Indians of the Kitkatla band. Members of the Hartley Bay band have also fished in this area. Salmon and eulachon are traditionally important to the Tsimshian.

The food fishery is centered around salmon, although groundfish permits are also issued. Most of the salmon food fish catch is taken using gillnets or drag seine. The majority of participants in the fishery are Tsimshian. Catch estimates are based on field estimates by D.F.O. personnel and from catch reports to the Kitkatla band office.

Butedale (Area 6)

Tsimshian Indians from the Hartley Bay band and Haisla Indians from the Kitimaat band reside in this subdistrict. Tsimshian Indians from the Klemtu band also fish in this area. The major food fish species are salmon, eulachon, herring and halibut. The Kitimat band harvests salmon using set nets in Kitimat arm near the reserve. Hartley Bay band members use commercial net gear in the waters south of the reserve. The Klemtu people generally fish in Laredo Inlet and Kitasu Bay. Most of the catch estimates are based on band supplied figures. Catch information is also collected during Fishery Officer patrols of the sport fishery.

Bella Bella (Area 7)

This subdistrict is occupied by the Klemtu band and by Kwakiutl Indians of the Bella Bella band. The major food fish species are salmon and bottomfish supplemented by herring and shellfish. Catch estimates are based on data collected by D.F.O. personnel. No patrol vessel is available from November to June and a small proportion of the effort is monitored. Guardians are hired from July to October, increasing the coverage.

Bella Coola (Area 8)

Coast Salish Indians from the Bella Coola band reside within this subdistrict. This area has also been fished by Anahim Lake and Chilcotin band members from the interior. The main food fish species are salmon, eulachon and trout. Salmon are harvested using commercial gillnets, short set nets and drift nets. The Bella Coola Indians have traditionally fished the Bella Coola and Atnarko Rivers. Fishing has also been conducted at other locations such as Dean Channel, North Bentinck Arm and Namu. The catch is estimated from data obtained by D.F.O. personnel through interviews. A guardian is present at the Bella Coola River beginning in May.

Rivers Inlet (Area 9)

This subdistrict is inhabited by Kwakiutl Indians of the Owikeno band. This

area has also been fished by nonresident band members, such as Bella Bella and Kitimat natives. Salmon are the major food fish of the Kwakiutl. The food fishery in this area is conducted primarily on the Whonnock river by the Owikeno band.

Smith Inlet (Area 10)

Currently, there is no food fishery in this area. Members of the Takush band fished the Takush and Nekite Rivers in the area prior to 1965.

Seymour Inlet (Area 10)

Currently, there is no food fishery in this area.

Alert Bay (Area 12)

Natives from the following bands reside in this subdistrict: Nimpkish, Port Hardy, Hopetown, Gilford Island and Kingcome Village. The area has also been fished by nonresident natives of the Kitimat, Bella Bella, Cape Mudge and Campbell River bands. The major food fish species are salmon and eulachon. Salmon are harvested in Johnstone Strait by commercial seine and gillnet gear. Set nets and drag seines are used in the river fisheries. A patrol vessel is required to be onsite in Johnstone Strait during each opening of the food fishery. As a result, there is relatively good control of catch and effort and catch data is collected at this time.

Campbell River (Area 13)

This subdistrict is inhabited by Coast Salish Indians of the Cape Mudge, Campbell River and Homalco bands. The Homalco band has fished Area 14. Salmon is the major food fish, supplemented by halibut and shellfish. Salmon are harvested using troll, gillnet and seine gear. There is a small amount of nontidal effort with gaff hooks.

Comox, Qualicum Beach (Area 14)

Coast Salish Indians from the Comox and Qualicum bands reside in Area 14. The Nanoose band has also fished in this area. Most of the Comox band's food fishery needs are met by fishing in Area 13. The major food fish is salmon supplemented by halibut and shellfish. Most of the salmon is obtained from surpluses at the Big Qualicum hatchery. The hatchery fish are supplemented by salmon harvested by commercial troll and seine gear. Salmon have also been harvested from the Puntledge River using gaff hooks. Salmon surplus to the needs of the resident bands are distributed to other bands on Vancouver Island.

Powell River (Area 15)

Coast Salish Indians of the Sliammon and Klahoose bands reside in this subdistrict. Natives from the Homalco band in Area 13 and the Sechelt band in Area 16 have also fished in this area. Salmon is the major food fish supplemented by halibut and shellfish. Salmon are harvested using set nets in

tidal waters from Okeover Arm and Malaspina Strait near the mouth of the Sliammon River. The Sliammon band traditionally fished the Sliammon River. Catch and effort data are collected by D.F.O. personnel during patrols as well as by the Sliammon band.

Pender Harbour (Area 16)

The Sechelt band resides in this subdistrict. Salmon is the major food fish supplemented by other fish. Salmon are harvested using set nets in front of the reserve. These catches are reported in Area 29. Commercial gear is used in other locations such as Jervis Inlet. Catch and effort data are collected by D.F.O. personnel during food fisheries using commercial gear. Catch data has also been collected by the Sechelt band.

Nanaimo/Ladysmith (Area 17)

Natives from the following bands reside in this subdistrict: Nanaimo, Nanoose, Chemainus, Penelakut, and Lyackson. Salmon are the major food fish supplemented by other fish. A large portion of the native catch is landed with commercial seines. Catch estimates are based on data collected by D.F.O. personnel monitoring the fishery. There is also an ongoing hook and line fishery. This fishery is carried out along side the sport fishery, and is monitored during sport fish patrols. In the fall, there are a number of inriver fisheries. The accuracy of the catch estimates for these fisheries depends on the amount of D.F.O. surveillance. Catch estimates made by fishery officers are supplemented by estimates provided by native fishermen.

Duncan (Area 18)

This subdistrict is inhabited by Salish Indians of the Cowichan band. Salmon is the main food fish supplemented by bottomfish and shellfish. Salmon are harvested using dip nets, gillnets, spears and gaff hooks on the Cowichan and Koksilah Rivers and Cowichan Bay. The Cowichan River fishery has been monitored by band employed enforcement officers since 1983. Catch data are collected by these officers and provided to D.F.O.

Victoria/Saanich (Area 19), Sooke (Area 20)

The Victoria/Saanich subdistrict is occupied by members of the following Salish bands: Tseycum, Pauquachin, Maluhat, Tsartlip, Esquimalt, Tsawout, and Songhees. The Sooke subdistrict is occupied by the following Salish bands: Sooke, Beecher Bay and Pacheenaht. Salmon is the major food fish supplemented by shellfish. Salmon are harvested in Saanich Inlet using a purse seine. Most of the fish caught in this fishery are sold to pay for the cost of the charter; the remainder are distributed among band members. In addition, Indians still carry out the traditional gaff-hook fishery in the Goldstream. Generally speaking, the catch statistics collected in this area for the purse seine fishery are very accurate; the statistics for the inriver fishery are less so.

Nitinat (Area 21)

This subdistrict is occupied by Nuu-Chah-Nulth Indians of the Nitinaht band. Salmon is the major food fish. Salmon are harvested from the Nitinat and Hobiton Rivers using gillnets. The fishery in this area is controlled by the band by authority of a band bylaw.

Port Alberni (Area 23)

This subdistrict is occupied by Nuu-Chah-Nulth Indians of the following bands: Ohiaht, Toqaht, Uchucklesaht, Opetchesaht, Ucluelet, and Sheshaht. Salmon is the major food fish supplemented by cod and halibut. Salmon, cod and halibut are harvested using troll gear in Barkley Sound. Most of the salmon are harvested from the tidal portion of the Somass River using gillnets and commercial seine gear. There has been some variation in the methods used to collect food fish catch data in Area 23 over the last 10 years. From 1977 to 1981, guardians were employed in the summer months. These guardians did physical counts of the salmon food fish catch. From 1981 to 1983, catch statistics were based on observations made by fishery officers during spot checks of the fishery. Since 1984, catch data gathered by fishery officers have been supplemented by Somass River catch figures supplied by the Sheshaht and Opetchesaht (1985 only) bands in Port Alberni.

Tofino (Area 24)

Nuu-Chah-Nulth Indians from the Clayoquot, Ahousaht, Opetchesaht and Hesquiaht bands reside within the boundaries of this subdistrict. Salmon is the major food fish, followed by cod in importance.

The salmon food fishery in Area 24 is carried out using two types of gear: troll gear and commercial net gear. In the troll fishery, catch figures are supplied by the fishermen themselves. Catch estimates are recorded on the back of food fishing permits, usually when the old permit is being returned and a new permit issued. An officer is usually present during the commercial net fishery. In addition to the salmon food fishery, natives jig for cod. No catch records are kept for cod.

Tahsis (Area 25)

This subdistrict is inhabited by Nuu-Chah-Nulth Indians from the Ehattesaht and Nuchatlaht bands. Salmon is the major food fish supplemented by cod and shellfish. Salmon are harvested by troll gear in Esperanza Inlet and by net gear in the river and lake fishery. Catch data from these fisheries is provided by the fishermen and recorded on the back of old fishing permits. The nontidal fishery has generally occurred on the Gold and Park Rivers and Owossitsa Creek.

Kyuquot (Area 26)

This subdistrict is occupied by natives from the Kyuquot band. Salmon is the major food fish. Troll gear is used primarily in Kyuquot Sound and Tahsish Inlet while net gear has been used in Clanninick Cove and Chamiss Bay. Catch

data from these fisheries is provided by the fishermen and recorded on the back of old fishing permits.

Quatsino Sound (Area 27)

This subdistrict is occupied by Kwakiutl Indians from the Quatsino band. Salmon is the major food fish. A small food fishery has taken place only occassionally since 1951.

Vancouver, Squamish (Area 28)

This area is fished primarily by Salish Indians from the Squamish band. Salmon are harvested on the Squamish, Capilano, Birkenhead and Lillooet Rivers by means of nets. In the Squamish River, band bylaws prevented Fishery Officers from regulating natives fishing from reserve land from 1978 through 1983. In August of 1983 the Department regained regulatory control of the river after receiving the legal opinion that reserve land ends at the river's edge. Catch data are collected by D.F.O. personnel and are based on inspection of the nets and interviews. Statistics for the Birkenhead and Lillooet Rivers are included with Fraser River statistics.

New Westminster District (Area 29, portion)

Area 29 includes the Fraser River system. The native food fisheries on this system are well documented by Schubert (1983, 1984). This report includes those portions of Area 29 not included in the Fraser River system or statistics. Total annual Fraser River catches only are included in this report because the detailed statistics are too extensive to be repeated here.

Whitehorse District (Yukon)

This district is responsible for all river and lake systems in the Yukon and northern B.C. The native food fisheries in this district have been well documented by Seigel (1985). Information from this report is presented here since the Yukon statistics are not as extensive as the Fraser River statistics.

The Yukon bands are as follows: Carcross, Little Salmon/Carmacks, Champagne/Aishihik, Dawson, Kluane Tribal Council, Niard (Watson Lake), Mayo, Old Crow, Ross River, Selkirk (Pelly Crossing), Teslin and Kwanlin Dun (Whitehorse). The northern B.C. bands are the Atlin and Tahltan bands. Salmon and freshwater fish are harvested in this district. Salmon fishing is conducted in the following river drainages: Yukon, Alsek, Taku and Stikine. Prior to the 1980's, catch estimates are based on population estimates and per capita consumption data. Catch calendars were distributed to some areas during the 1980's but the return rate was very low.

[1] B.C. TOTAL = Total of all available statistics for B.C. including the Fraser river system.

[2] Total does not equal the sum of the species because the species detail is not available for some areas in this year.

Appendix 2. Annual estimates of catch (pieces) by species from the native food fisheries, 1951-1984, Pacific region total.

ANNUAL CATCH BY SPECIES FROM THE NATIVE FOOD FISHERIES, 1951-1984, PACIFIC REGION TOTAL[1].

* Statistics are incomplete for this area.

Appendix 4. Detailed annual estimates of catch (pieces) by location, area and species from the Pacific region food fisheries, 1951-1984.

'NA' indicates that catch estimates are not available.
'*' indicates that the Location name is a band name.
